Lead with Judgment. Use AI with Confidence.

AI & LEADERSHIP TRAINING FOR PROFESSIONALS, TEAMS, AND ORGANIZATIONS

Tasha (TC) Cooper

Esq., PCC, AIGP

Founder & President
UpwardAction® Advisory

ABOUT TC

TC is an attorney, AI governance strategist, and executive coach with more than two decades of experience across law, executive leadership, privacy, and professional development.

Her diverse legal career includes more than 16 years of federal service, culminating as Chief Privacy Officer and Senior Agency Official for Privacy, as well as serving as corporate counsel and supporting the Board of Directors at an NYSE-listed company.

She graduated from Hampton University as a member of the Freddye T. Davy Honors College and from Columbia Law School as a Harlan Fiske Stone Scholar.

TC partners with professionals to define the judgment, expertise, and perspective they bring to their profession through her company's proprietary Unique Human Contribution™ Index; use AI with clarity about where it should assist, augment, or never replace their work; and lead with confidence, keeping their and their organization's use of AI trustworthy as the tools continue to evolve rapidly.

"Governance is how organizations innovate with confidence, and it begins with people who know what they uniquely bring."
TC Cooper

FEATURED TRAINING TOPICS

The Human Side of AI: Lead with Clarity and Confidence

AI predicts from patterns in what already exists, and judgment, expertise, and perspective come from people. In this Unique Human Contribution™ Index workshop, participants identify what they bring to their profession, sort their work into what AI should assist, augment, or never replace, and practice articulating their value with confidence to colleagues and leaders.

Outcome: A practical map of where AI supports their work and where their judgment leads.

Don't Let AI Think for You: Protecting Judgment in the Age of AI

AI responds with speed and confidence, and confidence is not the same as accuracy. Through realistic leadership scenarios, participants test AI output for accuracy, missing context, bias, and unsupported claims, verify sources before relying on them, and recognize the early signs of over-reliance. Each scenario ends with a human decision to accept, revise, or reject the output, with the reasoning clear enough to explain to others.

Outcome: A repeatable process for evaluating AI output before acting.

AI Governance Is Everyone's Responsibility

Explore confidentiality, transparency, oversight, and accountability across roles. Practice creating conditions for people to disclose AI use, raise concerns, and recognize when "not yet" is the responsible answer. Each session is customized to the organization's policies, roles, and priorities, so no two are the same.

Outcome: Practical questions and tools to help teams use AI responsibly.

DESIGNED FOR YOUR AUDIENCE

Clear instruction, guided reflection, and scenario-based exercises tailored to your audience's roles, responsibilities, and goals. Standalone workshops or a connected series, delivered virtually or in person.

Globally recognized credentials: Professional Certified Coach (PCC), International Coaching Federation, a global leader in coaching standards and ethics; AI Governance Professional (AIGP), International Association of Privacy Professionals, a leading global association for privacy, AI governance, and digital responsibility.
